# Customer Service Station 110 and 116

- Gave four station tours to children and their parents
- Taught Fire Safety to a local boy scout troop
- Mentored and trained two paramedic students, as well as three EMT students
- Continued Medical Education and Advanced Cardiac Life Support training
- Provided Rapid Intervention Team training
- Participated in the natural gas training in Magna
- Attended Incident Command System training

# Safety Message

## SMOKE DETECTOR BATTERIES

### **Change your Clock, Change your Smoke Detector Batteries!**

With the passing of Daylight Saving Time, now is a good time to remember to change your batteries in your smoke detectors.

### **Why should my home have smoke detector?**

In the event of a fire, a smoke detector can save your life and those of your loved ones. They are the single most important means of preventing house and apartment fire fatalities by providing an early warning signal, so you and your family can escape. Smoke detectors are one of the best safety features you can buy and install to protect yourself, your family and your home.

It is an unfortunate misconception that people will awaken at the sound or smell of a fire. This is sadly untrue. Oxygen deprived environments, gasses from smoke and burning items affect our ability to react "normally" even if we are light sleepers. Smoke detectors detect smoke in the early stages, giving you and your family the early warning you'll need to get out safely.

### **When should I replace my smoke alarms?**

Federal officials estimate that up to 85 percent of all dwellings in the United States have smoke detectors, but that as many as a third of them may not work. It is important to note that smoke detectors and carbon monoxide detectors **DO** expire and need to be replaced. Refer to the manufacture recommendation on expiration dates.

## SMOKE DETECTOR BATTERIES

### **How do I keep my smoke detectors working?**

Smoke detectors are very easy to take care of. There are two steps to remember: Simply replace the batteries twice a year. We always recommend this occur at the same time you change your clocks for daylight saving time. Meanwhile, if your smoke detector starts making a "chirping" noise, replace the batteries right away. Also, keep your smoke detectors clean—dust and debris can interfere with their operation, so vacuum over and around your smoke detectors regularly. Smoke detector "maintenance" should become a regular maintenance item in your household such as regularly cleaning lint from your dryer.

### **How often should I check my smoke alarm?**

Fire officials and smoke detectors manufacturers recommend that smoke alarms be checked monthly, changing the batteries twice a year.

### **Anything else I should know?**

Some smoke detectors are considered to be "hard wired." This means they are connected to the household electrical system and may or may not have a battery back-up. It is still important to test these smoke detectors monthly.

**This is also a good time to check your carbon monoxide detectors as well.**
